From the Desk of DG

Dear Readers

If education were a laboratory experiment, most of our best results would come with a label that reads: "After many trials" and that, perhaps, is the most honest way to describe any meaningful journey.

At CSRL, our journey has never followed a neat instruction manual, but a shared vision. It has unfolded through curiosity, course corrections, late nights, small wins, and lessons that often arrived disguised as setbacks.

Like good science, we learned early on that progress is not about getting everything right the first time, but about staying committed to the question: What more can be possible?

Every student who enters our ecosystem begins as potential—raw, energetic, and waiting for the right conditions. With mentorship as the catalyst and discipline as the constant, that potential slowly transforms into confidence and capability. In physics, energy never disappears; it simply changes form. In education, effort turns into outcomes, and outcomes into impact that travels far beyond classrooms and examination halls.

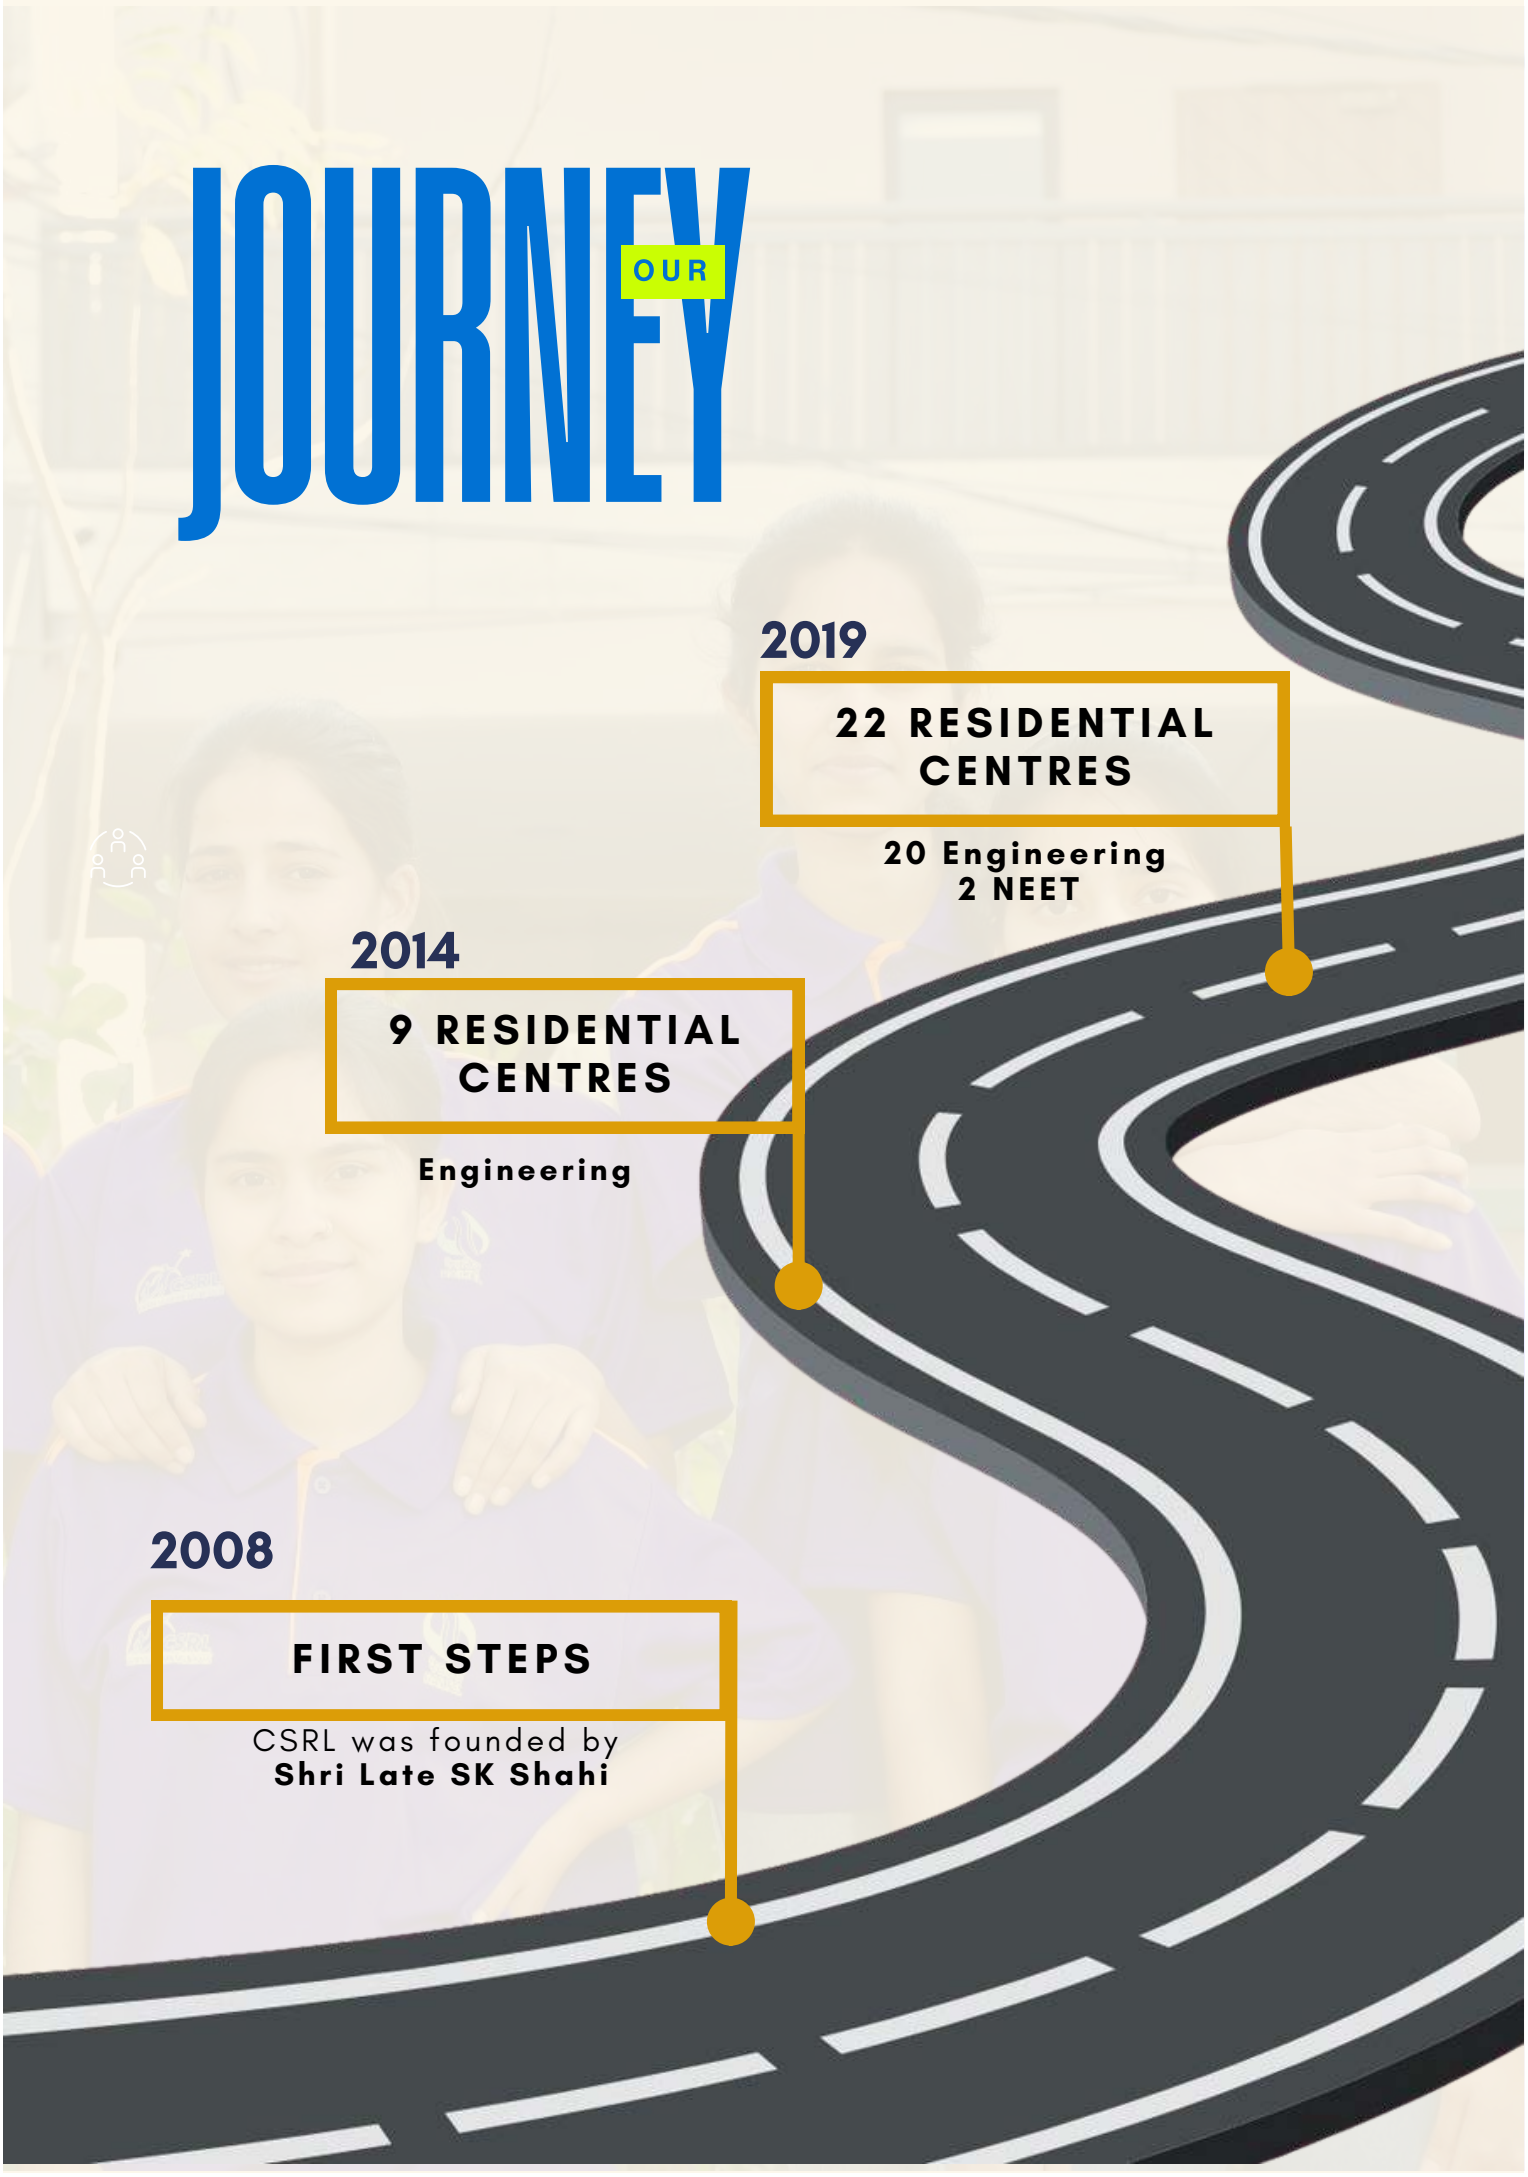

What makes this journey special is that it is shared. Educators, students, alumni, and supporters all contribute to a living process, one that grows richer with each batch and wiser with each year. The real measure of impact, we have learned, lies not in destinations reached, but in journeys enabled.

As another year of this shared journey comes to an end, and as we look ahead, the path remains open, evolving, and full of possibilities. Just like any worthwhile experiment, the journey continues with curiosity intact, purpose renewed, and belief firmly in place.

Shri NK Bharali

OVER THE YEARS

EVERY STEP TELLS A STORY

My journey with CSRL is more than a professional path—it is a story of growth, learning, and transformation.

I began this journey at OIL Pragyan Super 30, Guwahati, in a modest role as a Mess In-Charge. Those early days taught me discipline, responsibility, and the value of sincere effort. Within just four months, I was entrusted with greater responsibility as a Project Officer—a moment that marked the beginning of my professional evolution within CSRL.

In 2011, I was posted to the newly established OIL Pragyan Super 30 Centre in Jorhat, where I was given the responsibility of developing the entire infrastructure from the ground up. This experience taught me how vision is built brick by brick, and how strong foundations—both physical and organisational—are essential for long-term impact.

My journey then took me to the Delhi Head Office, where I gained exposure to systems, technology, and student engagement processes. This phase helped me develop skills that would later support my work across multiple centres and regions.

Later that year, I was entrusted with a major responsibility at GAIL Utkarsh Super 100, Kanpur, where I managed the entire selection process across Eastern Uttar Pradesh. Completing this successfully strengthened my confidence and preparedness. Subsequently, I conducted selection processes across 15 districts of Madhya Pradesh, and for National Super 100, Delhi, I led roadshows and written tests in Chhattisgarh.

In 2012, I was sent back to Assam and promoted to the position of Project Officer, reinforcing CSRL's trust in my capabilities.

The year 2013 marked a significant milestone when I had the opportunity to establish OIL Pragyan Super 30, Dibrugarh. This was followed by the setup of ONGC Super 30, Sivasagar, OIL Pragyan Super 30, Itanagar, and later OIL Pragyan Super 30, Nagaon. Each centre came with unique challenges, deepening my understanding of leadership, execution, and community engagement.

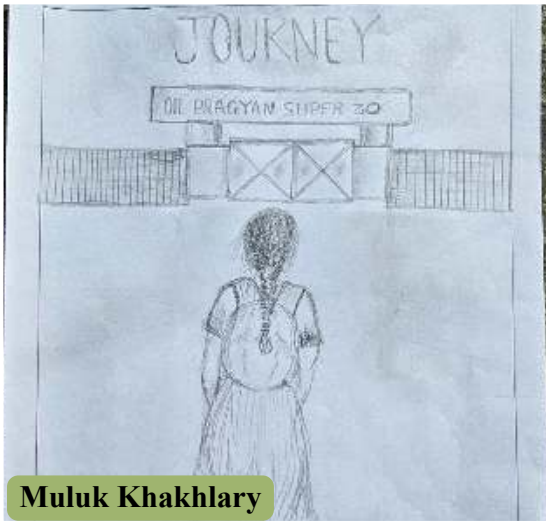

As the years progressed, I continued to grow within the organisation, serving as Senior Project Officer and later as Assistant Project Manager.

These roles helped shape my ability to lead teams, manage complex operations, and stay aligned with CSRL's larger mission.

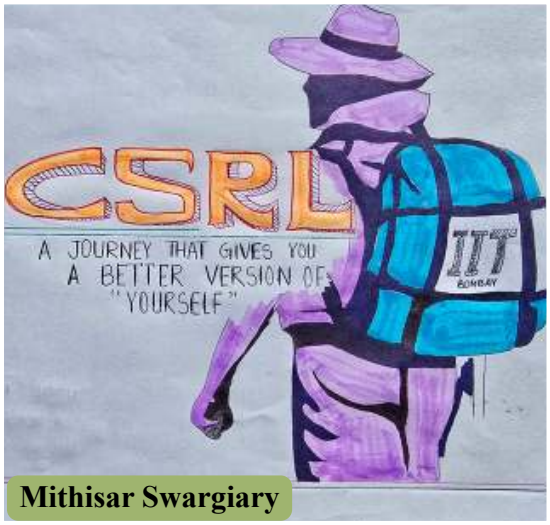

In 2022, I was entrusted with establishing Gyanodaya, Tezpur, followed by ONGC Super 30, Golaghat, and another Gyanodaya centre. By then, experience had become my strongest guide, making each new responsibility more purposeful and manageable.

For the past one year, I have been serving as the Project Manager at OIL Pragyan Super 30, Jorhat Centre—a role that reflects both continuity and growth in my journey.

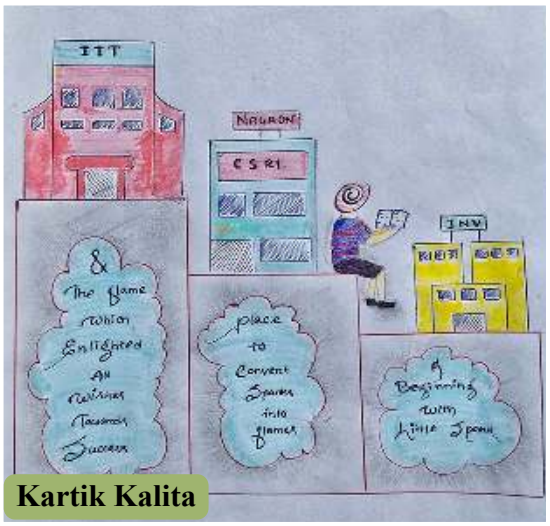

Throughout this journey, one truth stands out clearly: Without the consistent support, trust, and belief of CSRL's leadership, I would not have reached this milestone.

The Power of Peer Learning

Learning doesn't always happen from the teacher's desk — sometimes it happens when friends sit together and share ideas. That's the beauty of peer learning!

It's about growing through conversations, helping each other, and discovering that everyone has something valuable to teach. We've seen inspiring examples of this spirit — students like Salman and Suhail Rather, along with the dedicated girls from Kargil, who studied together, supported one another, and eventually qualified for the NEET examination. Their success proves that when minds collaborate and hearts stay united, learning becomes not just effective, but truly transformative.

3 myths EVERY IIT-JEE ASPIRANT MUST REJECT

Cracking the IIT-JEE is a dream for many science students. It is one of the most respected and challenging entrance exams in the country. Unlike board exams, which often focus on memory and writing answers, IIT-JEE tests how well you understand concepts and how effectively you can apply them.
Many students begin their preparation with excitement, but along the way, they also pick up some common misconceptions. Let us clear three major myths that every IIT-JEE aspirant should let go of.

Myth 1 BASICS ARE NOT IMPORTANT

This is one of the biggest mistakes students make. Science learning happens in steps: first you learn a concept, then you understand it, after that you analyze it, and finally you apply it to solve problems. If your basics are weak, solving advanced problems becomes extremely difficult.
Many students rush into solving high-level questions without fully understanding concepts like friction, conservation laws, or basic formulas. NCERT and standard textbooks are not meant only for board exams; they are the foundation of your preparation. Without clear basics, solving questions becomes guesswork.
Remember, science cannot be learned by memorizing solutions. Understanding always comes first.

Myth 2 IIT-JEE QUESTIONS ARE VERY COMPLEX AND FULL OF CALCULATIONS

This belief often creates unnecessary fear. If you look at previous years' question papers, you will notice that most problems are based on simple concepts, not heavy mathematics. The exam is designed to test how well you understand and apply ideas, not how fast you can calculate.
Many students get confused because they practice overly complicated problems during preparation. In reality, a simple question asked in a smart way is far more common in IIT-JEE. The paper setters know that students are fresh out of school, so clarity of concepts matters much more than complex calculations.

Myth 3 COACHING ALONE CAN GUARANTEE SUCCESS

Joining a coaching institute does not mean your work is done. Coaching can guide you, show you the right direction, and save time by organizing your preparation. But it cannot replace your hard work.
Real learning happens when you practice regularly, solve different types of problems, and learn from your mistakes. Coaching can help you work smarter, but only your effort can turn that into success. No institute can make you an IITian unless you are willing to put in consistent and honest work.

Fire safety awareness and training were conducted across all centres to ensure that students and staff are well prepared to respond effectively in emergency situations, remain alert even outside the premises, and extend help when faced with such incidents.

A Cyber Safety Awareness session was conducted to ensure that students remain safe and responsible while surfing the internet. The session focused on understanding potential online risks such as cyberbullying, phishing, data theft, and misuse of social media.

Centre beautification activities were undertaken as a means to encourage creativity while instilling a sense of responsibility among students.

Along the way

The journey is not defined by how fast we move or how light we travel, but by what we carry with understanding.

A young traveller once complained that his bag felt too heavy.

"Every step is harder than the last," he said. "Why must I carry so much?"

An old guide walking beside him asked, "What have you put inside?"

The traveller opened the bag. Inside were books he had struggled to read, notes from lessons he did not fully understand, memories of failure, doubts, small victories, letters from home, and dreams that felt too big to hold.

The guide smiled gently.

"You believe the bag slows you down," he said, "but it is the bag that makes you ready for the road."

He pointed to another traveller ahead—someone walking steadily, unafraid of the distance.

"That one once carried an even heavier bag. Over time, they learned what to keep, what to let go, and how to walk with purpose."

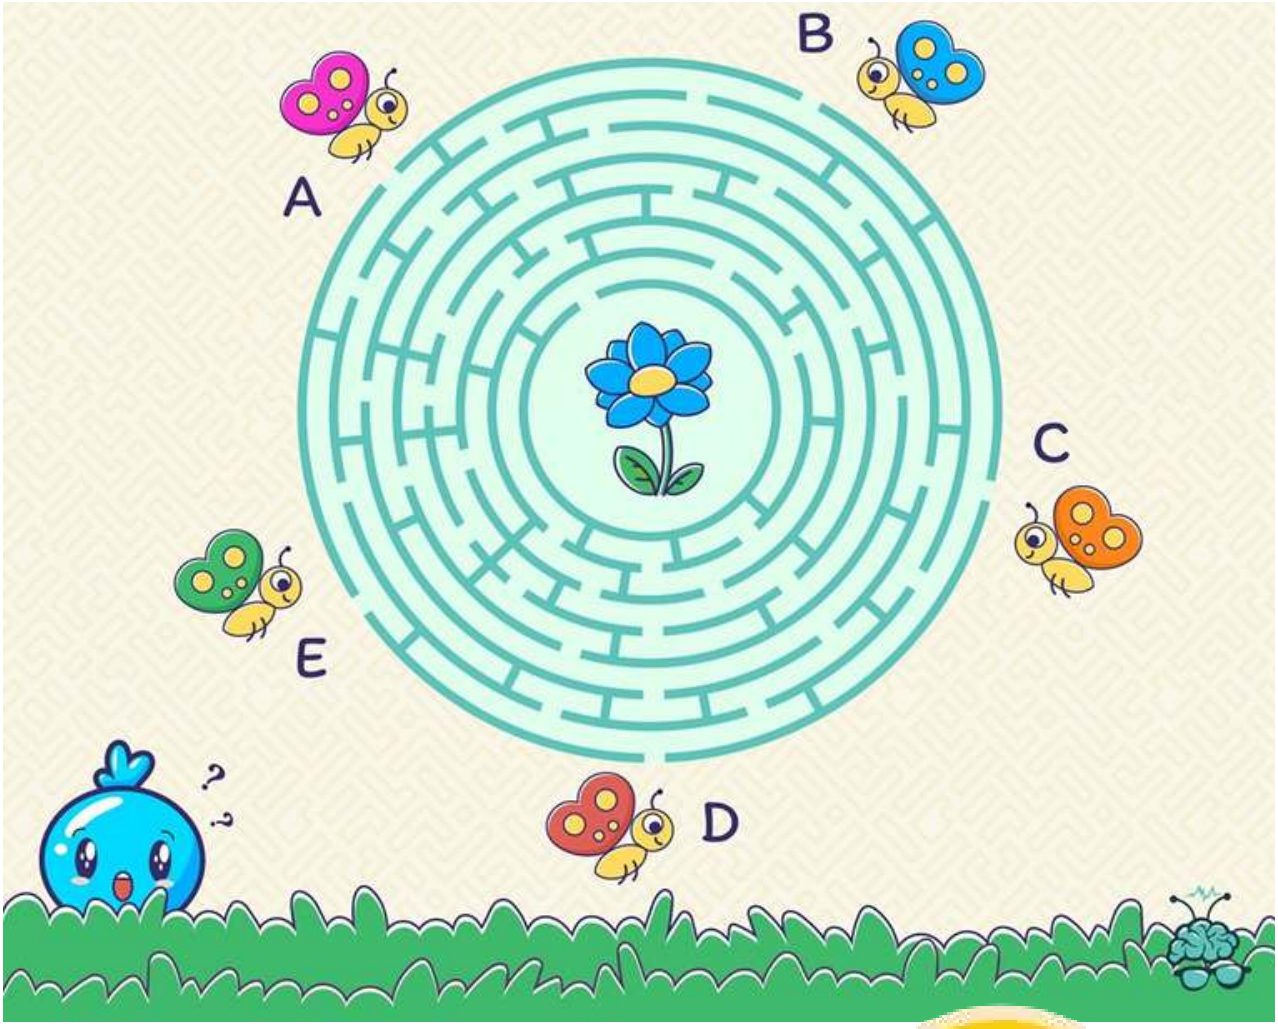

The young traveller paused. For the first time, he realised that the weight was not punishment—it was preparation. Each book sharpened his thinking. Each failure taught him resilience. Each doubt reminded him to seek help. Each dream gave direction.

He adjusted the straps and walked on.

The bag did not become lighter.

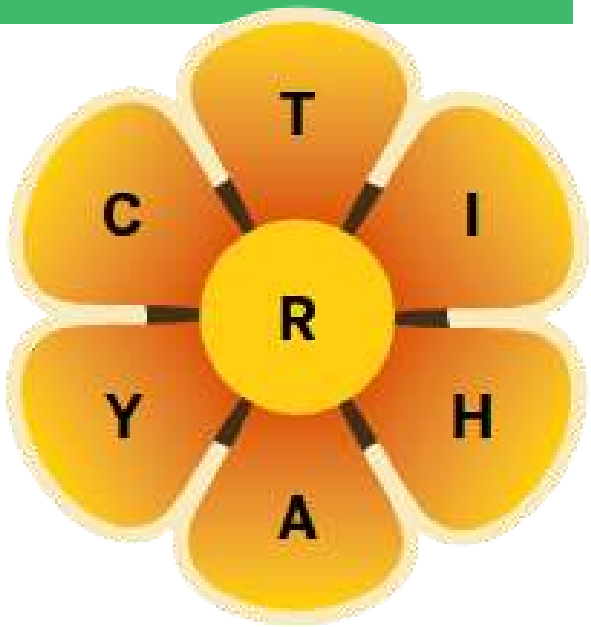

But he became stronger.

Which Butterfly will reach the flower?

WORD FLOWER

From the given letters, find as many words as possible. The central letter must be included in each word once. You can use the other letters as many times as you wish. Special points for finding a pangram—that is, a word that uses all the letters.
